The Australian Horticulture Statistics Handbook 2016/17 has been funded by Horticulture Innovation Australia Limited using the across industry levy and funds from the Australian Government.

This Handbook is an analysis that combines all available data on production, international trade, processing volumes and fresh market distribution in order to produce statistics on 75 horticultural categories over the year ending 30 June 2017.

Summary of Approach

The Handbook adopts a modelling approach that centres on determining the fresh market value and volume for each category, that reconciles production with local and international distribution channel throughputs. Fresh market supply volume is determined as follows:

Fresh Supply = Production - Fresh Exports - Processing + Fresh Imports

- Farm gate production quantity has been informed through a number of sources, including Hort Innovation funded data projects, horticultural government levy data where available, and refined through consultation with informed industry bodies. The corresponding value of production is calculated from wholesale pricing information, before removing known logistical, marketing and wholesale costs to reflect product value at the farm gate.
- Export and import trade volume and value is based on Australian Customs data as reported in IHS Global Trade Atlas data.
- Processing data has been obtained through consultation with industry processors¹.

See pages 16 and 17 under 'research method' for a detailed description on this Handbook's methodology.

¹Note that the \$ value of processing volumes has not been included in the analysis.

This publication covers the year ending 30 June 2017 and examines the production and distribution of horticulture products. Some of the key influences on horticultural production and distribution over this period are summarised below.

Production conditions were disrupted by climate events in Queensland and biosecurity in Western Australia with most of the impact on vegetables. In these conditions the wholesale value per kg of fresh fruit and vegetables supplied to the local market increased by 11.4% to \$2.45 per kg.

The domestic food market conditions remain competitive as new entrants into the retail channel expanded their store networks. Australian household expenditure on food out of home increased to 34.8% of total food expenditure and was reflected in stronger demand from food service buyers.

Total fresh horticulture exports were valued at **\$2.01 billion** in 2016/17 with increases in the exports of citrus, table grapes, macadamias, and carrots. This was 5% lower than the previous year, primarily driven by a marked reduction in Almond export prices.

Export market optimism has once again lifted and is reflected in a higher level of investment in export market development activity.

Availability of valid statistical information is a key enabler across horticulture. The Australian Horticulture Statistics Handbook for the year ending 30 June 2017, is presented by Horticulture Innovation Australia for the purpose of consolidating horticulture statistical information for use by horticulture industry members and other stakeholders.

The information sources for this publication have drawn on data available from the Australian Bureau of Statistics, Hort Innovation funded projects, international trade sources and horticulture industry representative bodies (IRBs) where available. In this publication these sources have been expanded to include and draw on household consumption and local market distribution channel information, as assessed by Freshlogic, to provide a reconciled profile of each supply chain.

Headers in import and export analysis tables for each category have been revised in this edition for clarity. ‘Imports by state destination’ refers to the final destination of the product. ‘Exports by state of production origin’ refers to the state of origin where that product was produced.

Where additional information has led to a change in the previously quoted value from the 2015/16 edition for a category, this has been noted on the page of the relevant category.

This edition of the Handbook is made available electronically via the Hort Innovation website, at www.horticulture.com.au

Hort Innovation will evaluate the uptake and usage of the Handbook to ensure that future editions are delivered according to user needs.

Any comments regarding the Handbook should be forwarded to Hort Innovation at: feedback@horticulture.com.au

The 2016/17 Handbook has been compiled by Freshlogic.

Abbreviations

% YoY	% increase/decrease this year compared to last year
\$	Australian Dollars
\$b	Billion Australian Dollars
\$m	Million Australian Dollars
2016/17	Year ending 30 June 2017

US	United States of America

Definitions

Category—A particular horticultural commodity (e.g. bananas), or in some cases a combination of like commodities (e.g. the category ‘rubus berries’ covers raspberries and blackberries and other rubus).

Production—The volume in tonnes of the category that was grown in Australia over the year. This refers to production which was sold by the producer, either to the Australian fresh or processing markets, or to international trade markets. This does not cover any production that was not harvested, nor does it refer to any other forms of production of the category that do not enter these markets.

Value of Production—Sometimes referred to as ‘Farm Gate Value,’ this is the value of the production received by the producer.

Processing Volume—The volume in tonnes of the category that was sent to be processed, such as juicing, freezing or preserving.

Fresh Exports—The volume in tonnes of the production that was exported in a fresh form to other countries. Due to the way trade information is recorded, this may include some dried products, and will be marked as such where appropriate.

Value of Fresh Exports—The value in million dollars of the category’s fresh exports. This is recorded in FOB (Free on Board) dollars.

Fresh Imports—The volume in tonnes of the category that was imported into Australia from another country in a fresh form.

Value of Fresh Imports—The value in million dollars of the category’s fresh imports. This is recorded in CIF (Cost of Insurance and Freight) dollars.

Fresh Supply—The volume in tonnes of the category that was available to the Australian market in a fresh form. Volume supplied to the fresh market is typically either sold at retail or supplied to food service outlets.

Wholesale Value—The value in million dollars of the fresh supply at a wholesale market level, inclusive of net international trade flows. *Note that the Wholesale value is distinct from the Gross Value of Production tracked by the ABS, as that measure includes value of processing and exported product, and does not include imported product.*

In-Shell (Nut categories) —A measure of volume that includes the weight of the inedible shell around the kernel.

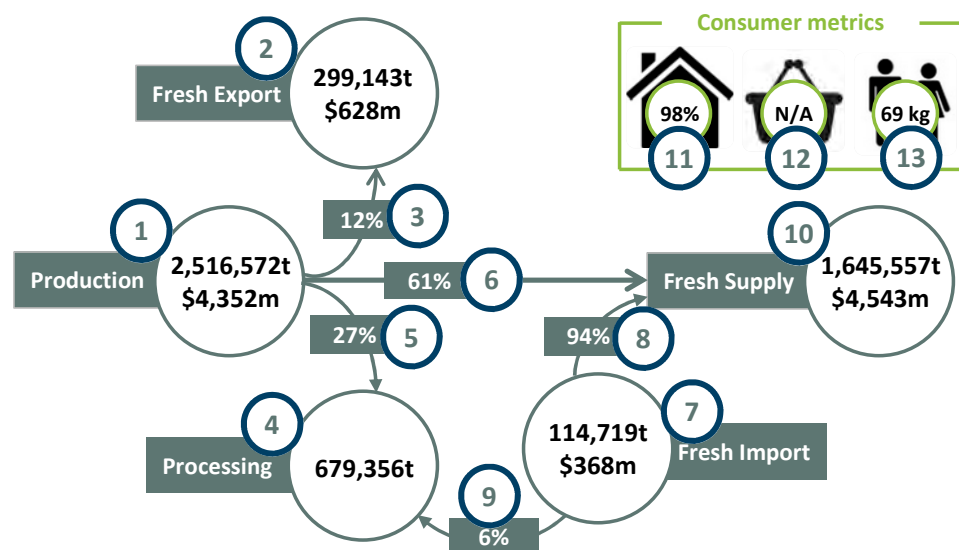

Kernel (Nut categories) —A measure of volume that only includes the edible kernel.

Crack Out Yield (Nut categories) —The percentage of edible kernel obtained from the in-shell volume during the cracking process.

This section outlines how to interpret the various graphs, tables and supply chain models used to profile each of the horticultural commodities covered in this handbook.

Fresh supply chain—Fruit and Vegetables

This example supply chain outlines the flow of a fruit or vegetable category over the year ending June 2017. It contains the following elements:

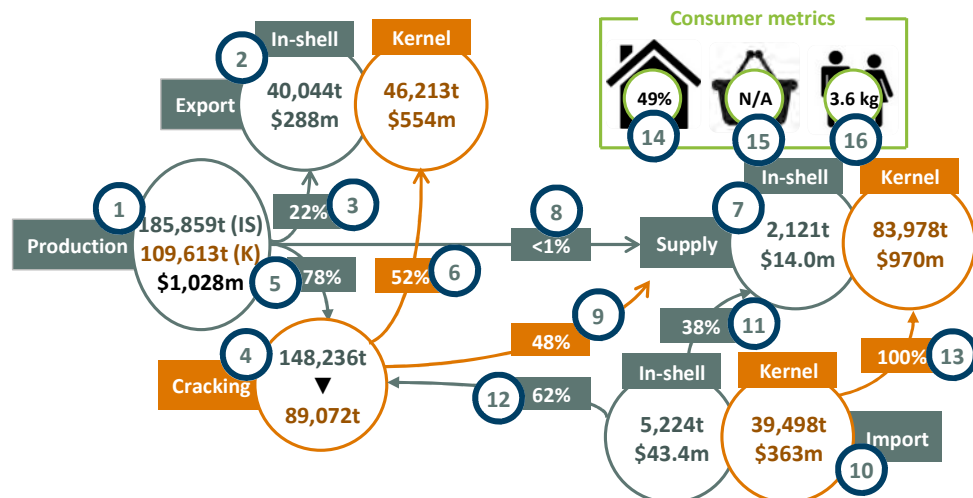

- 1. Production.** This is the volume of the category grown in Australia over the year ending June 2017. This profiles the **Production** (volume in tonnes), as well as the value in million dollars obtained by the producers i.e. the **Value of Production**, sometimes known as the farm gate value.
- 2. Fresh Exports.** The volume in tonnes of the production that was exported in a fresh form, and the value in million dollars received.
- 3. Export Share.** The percentage share of production that was exported.

- 4. Processing.** The volume in tonnes of the production that was sent to be processed (such as juicing, freezing or preserving etc).
- 5. Processing Share.** The percentage share of production that was processed.
- 6. Fresh Supply Share.** The percentage share of production that was sent to the Australian fresh market.
- 7. Fresh Imports.** The volume in tonnes of the category that was imported in a fresh format from another country, and the value in million dollars paid to import.
- 8. Import Fresh Supply Share.** The percentage share of fresh imports that was sent to the Australian fresh market.
- 9. Import Processing Share.** The percentage share of fresh imports that was sent to be processed.
- 10. Fresh Supply.** The volume of the category available to the Australian fresh market. It includes both Production that was sold into the fresh market, as well as Fresh Imports that were sold into the fresh market. This profiles the **Fresh Supply** (volume in tonnes), and the **Wholesale Value** in million dollars, which is the value of the Fresh Supply at a wholesale market level.
- 11. Household Penetration.** The percentage of Australian households who bought the category at least once at retail, to be consumed either in or out of the home, over the year ending June 2017. 'Out of home' consumption is food prepared away from the home typically via food service channels and not prepared from ingredients purchased via retail.
- 12. Average Purchase Quantity.** The average quantity purchased at retail per shopping trip by Australian households over the year ending June 2017. A shopping trip refers to a trip where this category is purchased.
- 13. Fresh Supply per Capita.** The volume of fresh supply available to the Australian population, on a per capita basis.

Supply chain—Nuts & Olives

This example supply chain outlines the flow of a nut category over the year ending June 2017. Because nuts are sold both in an **In-Shell** and **Kernel** format, the nut supply chain profiles both elements, indicated by **green** for **In-Shell** and **orange** for **Kernel**. The chain contains the following elements:

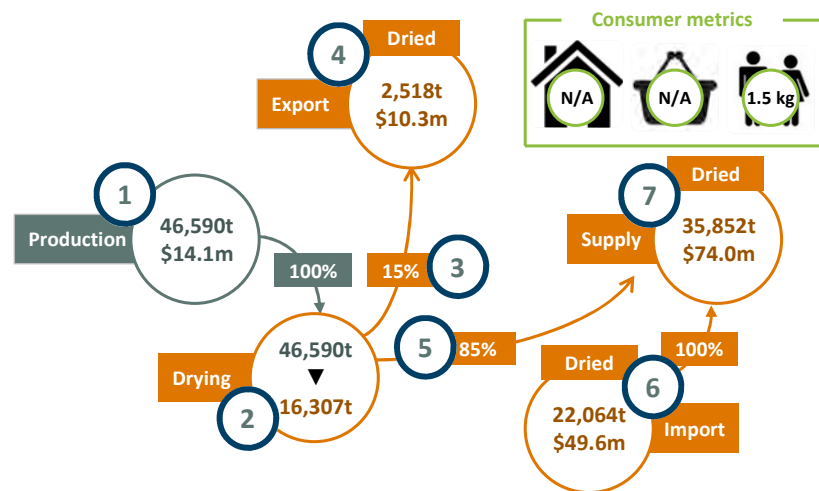

- 1. Production.** This is the volume of the category grown in Australia over the year ending June 2017. This profiles the **Production** (volume in tonnes), in both **In-Shell** (written in **green** and denoted by **IS**) and the **Kernel** equivalent of this volume after cracking (written in **orange** and denoted by **K**), as well as the value in million dollars obtained by the producers i.e. the **Value of Production**.
- 2. Exports.** The volume in tonnes of the production that was exported, and the value in million dollars received. This profiles both **In-Shell** exports and **Kernel** exports.
- 3. In-Shell Export Share.** The percentage share of **In-Shell** production that was exported.
- 4. Cracking.** The volume in tonnes of the **In-Shell** production and imported **In-Shell** product that was sent to be cracked so as to produce kernel. This profiles both the **In-Shell** volume in, and the **Kernel** volume out.

- 5. Cracking Share.** The percentage share of **In-Shell** production that was cracked.
- 6. Kernel Export Share.** The percentage share of cracked **Kernel** that was exported.
- 7. Supply.** This is the volume of the category available to the Australian market. It includes both Production that was sold into the market, as well as Imports that were sold into the market. This profiles the **Supply** (volume in tonnes), and the **Wholesale Value** in million dollars, which is the value of the Supply at a wholesale market level. It covers both **In-Shell** and **Kernel** supply.
- 8. In-Shell Supply Share.** The volume in tonnes of the **In-Shell** Production that was supplied to the market.
- 9. Kernel Supply Share.** The volume in tonnes of cracked **Kernel** that was supplied to the market.
- 10. Imports.** The volume in tonnes of the category that was imported from another country, and the value in million dollars paid to import. Profiles both **In-Shell** and **Kernel** imports.
- 11. In-Shell Import Supply Share.** The percentage share of **In-Shell** imports that was sent to the Australian market.
- 12. In-Shell Import Cracking Share.** The percentage share of **In-Shell** imports that was sent to be cracked.
- 13. Kernel Import Supply Share.** The percentage share of **Kernel** imports that was sent to the Australian market.
- 14. Household Penetration.** The percentage of Australian households who bought the category at least once at retail, to be consumed either in or out of the home, over the year ending June 2017. See page 11 for full definition.
- 15. Average Purchase Quantity.** The average quantity purchased at retail per shopping trip by Australian households over the year ending June 2017. A shopping trip refers to a trip where this category is purchased.
- 16. Fresh Supply per capita.** The volume of fresh supply available to the Australian population.

Note that olives (fruit) uses the same supply chain format as nuts. However, instead of an in-shell form, the supply chain refers to table olives, and instead of a kernel form, the supply chain refers to olive oil. The term "Cracking" is also replaced with "Oil Production".

Processed supply chain—Dried/Canned Fruit

This example supply chain outlines the flow of the three dried/canned fruit categories over the year ending June 2017. It contains the following elements:

- 1. Production.** The volume of the category grown in Australia over the year ending June 2017. This profiles the **Fresh Production** (written in **green**) and as well as the value in million dollars obtained by the producers i.e. the **Value of Production**.
- 2. Drying/Canning.** The volume in tonnes of the **Fresh** production that was sent to be processed. This profiles both the **Fresh** volume in, and the **Processed** volume out (written in **orange**).
- 3. Export Share.** The percentage share of **Processing** that was exported.
- 4. Dried/Canned Exports.** The volume in tonnes of the **Processing** that was exported in a **Processed** form, and the value in million dollars received.
- 5. Supply Share.** The percentage share of **Processing** that was sold locally.
- 6. Dried/Canned Imports.** The volume in tonnes of imported **Processed** product, and the value in million dollars paid to import.
- 7. Supply.** This profiles the **Supply** (volume in tonnes), and the **Wholesale Value** in million dollars, which is the value of the Supply at a wholesale market level. It includes both **Processed** production that was sold into the market, as well as **Processed** Imports that were sold into the market.

Data Tables

These tables are provided for each category. They profile key elements over the last three years (for the years ending June 2015, June 2016 and June 2017), as well as the percentage change in value year on year. They contain:

Year Ending June	2013	2014		2015	
	Value	Value	% YoY	Value	% YoY
Production (t)	77,844	83,527	+7%	87,543	+5%
Production (\$m)	\$ 567.0	\$ 644.2	+14%	\$ 679.0	+5%
Production area (Ha)	2,092	3,123	+49%	-	-
Fresh Export Volume (t)	850	1,630	+92%	2,015	+24%
Fresh Export Value (\$m)	\$ 6.3	\$ 11.8	+88%	\$ 14.5	+23%
Fresh Import Volume (t)	1,098	1,138	+4%	1,039	-9%
Fresh Import Value (\$m)	\$ 17.0	\$ 19.1	+12%	\$ 18.6	-2%
Fresh Supply (t)	65,660	70,217	+7%	73,271	+4%
Fresh Supply Wholesale Value (\$m)	\$ 681.4	\$ 767.1	+13%	\$ 809.0	+5%
Supply per Capita (kg)	2.84	2.99	+5%	3.08	+3%

- Production.** The volume of the category grown in Australia.
- Value of Production.** The value of the production over the year.
- Production Area/Number of Trees/Vines.** A measure of the growing area of the category (in hectares), or the number of trees/vines used to grow the category over the year. This data has been gathered from the Australian Bureau of Statistics Agricultural Statistics information, the largest survey of growers available. *This information has been included for indicative purposes only, and should be viewed as such.*
- Export Volume and Value.** The volume in tonnes and the value in million dollars of the category exported in a fresh form over the year.
- Import Volume and Value.** The volume in tonnes and the value in million dollars of the category imported in a fresh form over the year.
- Supply.** The volume in tonnes of the category made available to the local Australian fresh market, including locally grown product and imported fresh product.
- Wholesale Value.** The value in million dollars of the supply at a wholesale market level.
- Supply per capita.** The volume available to the Australian public. Calculated as the volume supply divided by the population for the year.

Overview

This publication has gathered all available horticultural information and aligned it into supply chain profiles for each of the horticultural categories covered. The approach for each horticultural category has been to quantify available production, volumes processed, volumes exported and imported, and to then confirm that the resulting fresh volume supplied aligns with the Australian market distribution channels (primarily the retail and foodservice channels). This volume of fresh supply available to the Australian fresh marketplace is defined using the equation:

$$\text{Fresh Supply} = \text{Production} - \text{Fresh Exports} - \text{Processing} + \text{Fresh Imports}$$

The distribution channel modelling has drawn upon Freshlogic's THRUChain modelling system to ensure that fresh supply accommodates the sum volumes distributed by retail and food service channels. In the process of this modelling, information has been gathered from a number of supply chain sources and aligned with household consumer purchase metrics. The primary outputs are designed around aligned supply chains that map the distribution of total production. This design was used to deliver the most informed and accurate profiles and the outputs have been further confirmed by conferring with Industry Representative Bodies. The larger Industry Representative Bodies have advanced supply chain information systems in place and the outputs from these systems have been accessed to provide data inputs and validate findings.

In calculating the **production** and **volume processed**, a number of data sources have been relied upon. Where available and in most instances, this has been guided by information from Australian government horticultural levies, and refined through consultation with the Industry Representative Bodies and major trading stakeholders (such as processors, wholesalers and distributors) for the particular category.

Information on Australia's **imports and exports** of fresh and processed horticultural commodities has been compiled using the Global Trade Atlas®, an online global trade information database owned and operated by IHS Markit. Information on Australian trade in the Global Trade Atlas® has been compiled

from information provided to the Australian Customs and Border Protection Service. The Import and Export analysis tables for each category identify the import source country under "Imports by country" and the export destination country under "Export by country".

Information on **wholesale value** has been modelled using wholesale pricing information from *Ausmarket Consultants* and the *Chamber of Fruit and Vegetable Industries in Western Australia*. This information has been used to define the **Value of Production** by removing known logistical, marketing and wholesale costs to calculate the value of categories to producers at farm gate.

Consumer information including percent of households purchasing a category, and average purchase quantities, has been sourced from Freshlogic's *Mealpulse™* consumer survey and *DocketData™* systems. Supply per capita has been calculated as total volume of fresh supply divided by population for the year ending June 2017 according to the ABS. The number of occupied households is assumed at 8.4 million and the population at 24.6 million for the 2016/17 year*.

Data on **production area** and **number of trees** has been gathered from Industry Representative Bodies and the ABS Agricultural Commodities publications**. *This information has been included for indicative purposes only, and should be viewed as such.*

Information on **major growing regions** has been sourced both from the ABS Agricultural statistics, and through consultation with the major Industry Representative Bodies. These sources have also been used to profile seasonality and production volumes by state and by main variety of the category. *Note the information on volume by state and main variety has been included for illustrative purposes, and actual volumes may be within 10-25% of the listed volume.*

Throughout the document when data sources have been relied upon, this has been noted. Some of the more common sources have been abbreviated. The full list of sources has been provided on pages 18 and 19.

*ABS, Australian Demographic Statistics cat. no. 3101.0

**ABS, Agricultural Commodities cat. no. 7121.0

Common Data Sources

Abbreviation	Data Source	Further information
ABS	<i>Agricultural Commodities</i> , Australian Bureau of Statistics	Information from <i>Agricultural Commodities cat. no. 7121.0</i> , 2015-16, 2014-15 and 2013-14 editions has been compiled. <i>Australian Demographic Statistics cat. no. 3101.0</i> June 2017 edition. <i>2016 Census of Population and Housing</i>
AC	Ausmarket Consultants	Wholesale pricing information from the Adelaide, Brisbane, Melbourne and Sydney wholesale markets.
CFVIWA	Chamber of Fruit and Vegetable Industries of Western Australia	Wholesale pricing information from the Perth wholesale market.
Freshlogic Analysis	THRUChain analysis—Freshlogic	Supply chain modelling system that aligns the volumes of production and international trade with the volumes distributed through processing and all domestic market channels.
GTA	IHS —Global Trade Atlas®	www.gtis.com/gta

Abbreviation	Data Source	Further information
IRB	Industry Representative Bodies	Consultation with informed bodies to ensure information reconciles. The abbreviation 'IRB' is listed where multiple industry bodies were contacted for a category/group. Where one industry body was contacted for an individual category, the relevant name is listed.
MP & DD	Mealpulse™ panel and DocketData™	Freshlogic operated information gathering tools that provide the detail of household purchasing behaviours and a basis to reconcile supply with Australian market distribution channels.

Data sharing-List of projects

List of projects

In addition to common data sources, a number of Hort Innovation funded projects have provided data outputs which have informed the information provided in this handbook. These are outlined in the table below. Hort Innovation would like to acknowledge their input.

<u>Project Code</u>	<u>Project Title</u>
AL16002 (Almonds)	<i>Australian Almond Industry Statistics</i>
AP16002 (Apples)	<i>Apple and Pear Crop Estimates</i>
AV16006 (Avocados)	<i>Avocado Industry Data Capture and Analysis</i>
CH15000 (Chestnuts)	<i>Communication and adoption program for the Australian Chestnut Industry</i>
CT15012 (Citrus)	<i>Australian Citrus Industry Innovation and Market Development Program</i>
CU15002 (Custard Apples)	<i>Custard Apple Dispatch System 2</i>
MC15005 (Macadamias)	<i>Benchmarking the Macadamia Industry 2015-2018</i>
MC15009 (Macadamias)	<i>Macadamia Crop Forecasting 2015 - 2018</i>
MG13017 (Mangoes)	<i>Capacity Building, Information, Technology and Extension for the Australian mango industry (Crop Forecast)</i>

Data sharing-List of projects

<u>Project Code</u>	<u>Project Title</u>
TM13007 (Tomatoes)	<i>Australian Processing Tomato Industry Capacity Building Program</i>
TU16001 (Turf)	<i>Turf industry statistics and research 2016/17</i>
VG15077 (Vegetables)	<i>Financial Performance of Australian Vegetable Farms 2016-17 to 2018-19</i>

Total Imports

For the year ending June 2017, Australia imported **\$2.79 billion** worth of horticultural products. *The values below do not include wine grapes.* Processed fruit was the largest value import grouping. The value of imports by group is profiled in the chart and table below. The table below also includes the **top 3** import categories by value within each group. The value for nuts includes some processed nut products.

Imports of fresh horticultural products by region

These pages profile total imports of **fresh** horticultural products by 7 world regions. For each region, the total imports of fresh products is profiled, as well as up to the top 10 products **by value**, on products where imports exceed \$1 million.

The relative share of the **value** of imports from each of the 7 regions is also profiled in the circle associated with each region. Note that the total value and volume for all regions (located at the bottom left of the page) includes import information with no specified country, and therefore may exceed the sum of the individual regions.

Exports of fresh horticultural products by region

These pages profile total exports of **fresh** horticultural products by 7 world regions. For each region, the total exports of fresh product is profiled, as well as up to the top 10 products **by value**, on products where exports exceed \$1 million.

Production Volume

The table below summarises the **Production** in **tonnes** of all products profiled in this statistics handbook, where appropriate, for the year ending June 2017.

Year Ending June 2017	Production (t)	Year Ending June 2017	Production (t)
All Horticultural Products	6,337,978	Passionfruit	5,004
All Fruit	2,649,093	Papaya/Pawpaw	18,381
Apples	319,686	Persimmons	2,516
Avocados	65,992	Pears	108,065
Bananas	413,660	Pineapples	77,482
Berries - Combined	106,582	Summerfruit - Combined	126,177
Blueberries	9,553	Apricots	7,163
Rubus Berries	5,946	Nectarines/Peaches	92,017
Strawberries	91,083	Plums	26,997
Cherries	11,012	Table Grapes	171,637
Citrus - Combined	708,121	Processing Fruit Combined*	261,639
Grapefruit	12,647	Dried Grapes	67,500
Lemons/Limes	41,436	Prunes*	12,500
Mandarins	147,648	Other Dried Tree Fruit*	1,528
Oranges	506,391	Canned Fruit*	50,111
Custard Apples	1,764	Olives	130,000
Kiwifruit	9,791	Other Fruit	7,686
Lychees	2,419	All Vegetables	3,502,673
Mangoes	61,474	Artichokes	374
Melons - Combined	231,146	Asparagus	8,033
Muskmelons	67,020	Beans	29,039
Watermelons	164,126	Beetroot	14,053
Nashi	3,000	Broccoli/Baby Broccoli	75,231

Sources: ABS; GTA; IRB; MP & DD (Freshlogic Analysis)

Note: The processed fruit lines marked with an asterisk () do not contribute to total fruit production, as they have been counted towards the total in their respective categories (eg production of canning pineapples are already counted in the pineapple category). The exceptions are dried grapes, which is not a part of the table grapes category, and olives, which is not part of another fruit category.*

All Fresh Horticulture Overview

Pages 48-51 profile total horticultural production and trade. It combines information on fruit, vegetables, nuts and other horticultural categories (cut flowers, nursery and turf).

For the year ending June 2017:

- **6.34 million tonnes** of horticultural products (not including cut flowers, nursery and turf products) was produced in Australia.
- The value of production for all categories was **\$12.9 billion** while the wholesale value of the fresh supply was **\$13.2 billion**.
- The supply per capita was **161 kg**, based on the volume supplied.

Cut Flower Overview

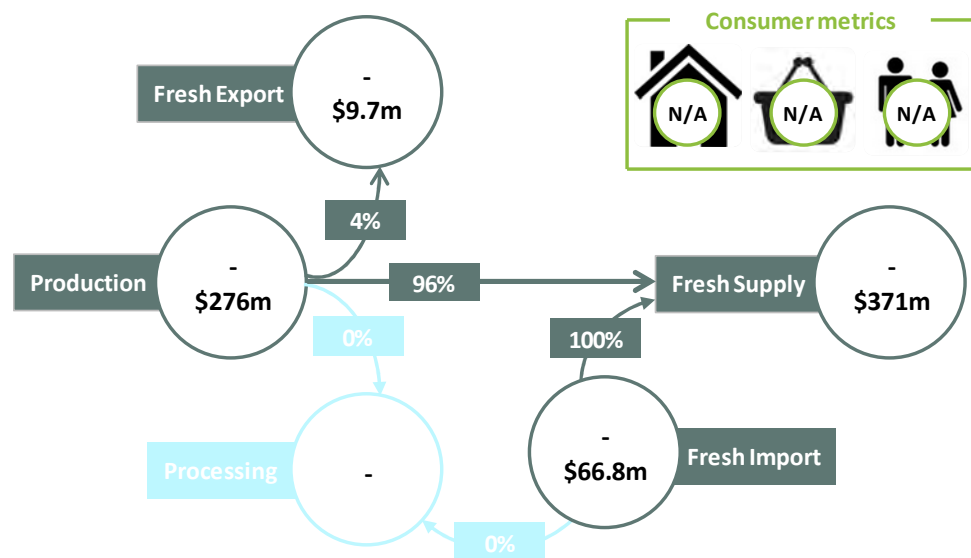

Cut flowers are grown year round in Australia, with peaks in February for Valentines' day, May for mother's day, and a smaller peak in December for Christmas. Production occurs in high tech glasshouses, lower tech protected cropping, as well as in outdoor fields. The majority of cut flowers grown in Australia are grown in Victoria.

Cut flowers have been represented in the supply chain below by their value rather than volume due to inconsistencies in the units by which volume of production is measured.

For the year ending June 2017:

- The value of production was **\$276.2 m** while the local wholesale value of the fresh supply was **\$370.9 m**.

Cut Flower International Trade

Australia is a net importer of fresh cut flowers, with smaller amounts of exports every year. International trade has been presented in terms of value rather than volume, due to inconsistencies in the way trade volume data is recorded. For the year ending June 2017, Australia exported **\$9.7 million**, and imported **\$63.5 million** worth of cut flowers. The exports and imports over the last 5 financial years is profiled in the graph to the right, where imports are counted as negative million dollars.

Nursery Overview

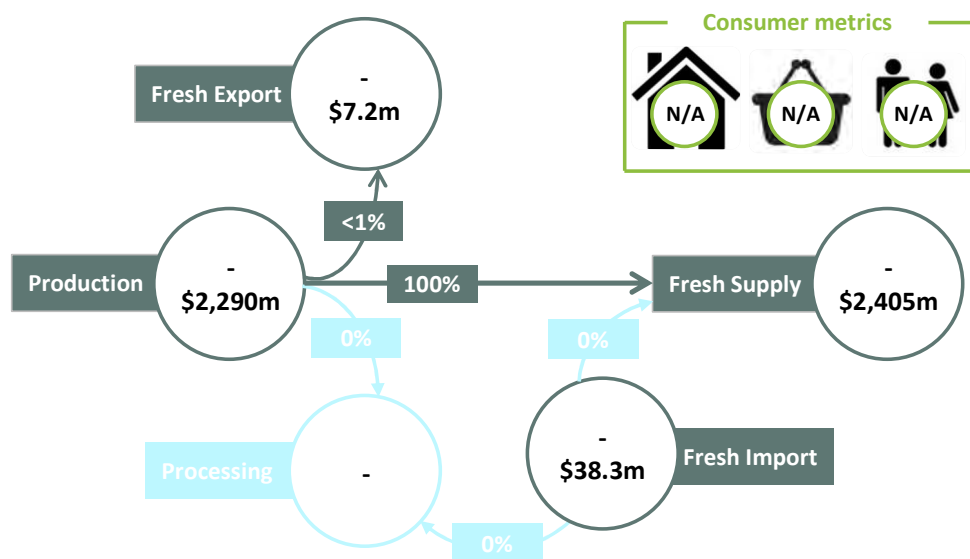

Nursery covers live plants grown for a range of uses that include; landscaping, revegetation and distribution of ornamental retail supply chains, plus as starter plants in the commercial production of fruit, vegetables and forestry. Nursery production occurs in all states and territories of Australia, with the majority of production occurring in Victoria, Queensland and New South Wales. Production occurs year-round, with peaks during the key crop planting periods to accommodate the spring season for ornamental retail product lines.

For the year ending June 2017:

- Production has been represented below by their value rather than volume.
- The value of production was **\$2.29 billion** while the wholesale value of the fresh supply was **\$2.40 billion**.

Turf Overview

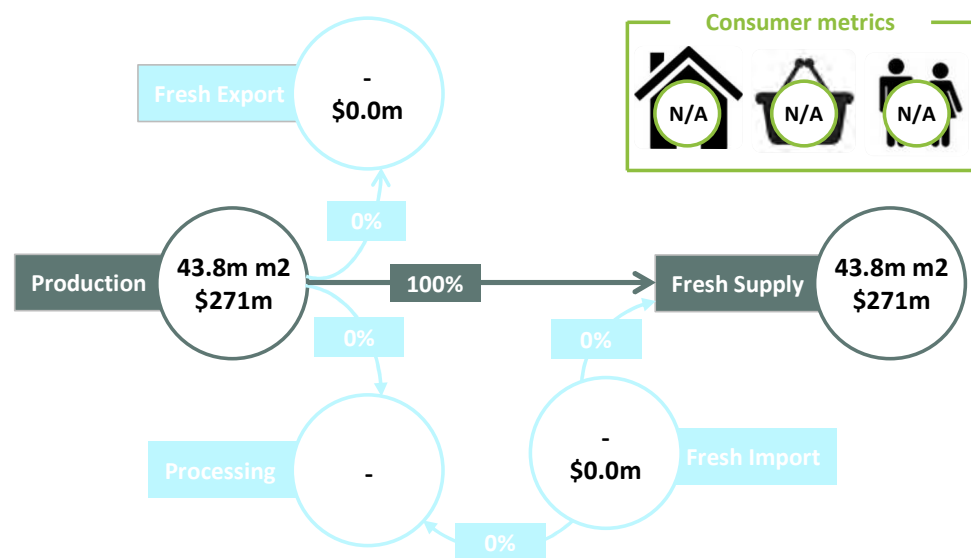

Turf covers live grass products grown for parks, gardens, residential and commercial properties, sporting venues and for land rehabilitation and landscape improvement purposes. Production occurs in all states and territories of Australia. The majority of production occurs in New South Wales and Queensland. Production is year-round, with a number of different varieties being grown, although there is a peak of production during the spring and summer months.

Turf production has been represented in the supply chain below by million square metres.

For the year ending June 2017:

- **43.8 million m²** was produced.
- Turf production was worth **\$271 m** in Value of Production, with the fresh supply of turf having a Wholesale Value of **\$271 m**.
